## Engineering Products

### MEGASTONE N

EN-2235

Introducing Megastone, a premium two-component adhesive paste renowned for its exceptional bonding and adhesion properties. Specifically formulated for dry facade applications, anchoring, and bonding various building stones—including porcelain, granite, travertine, and artificial stones—onto diverse substrates. Megastone not only ensures superior bonding strength but also contributes to a lighter building structure, thanks to its low density and significantly reduced consumption compared to traditional cement mortars. Its chemical resistance makes it suitable for application on a wide range of hard substrates, including metallic frames and concrete. Rest assured, Megastone is certified to meet the rigorous standards outlined in ASTM C881, guaranteeing reliability and performance.

### HYBRID SEAL

EN-3171

In today's industrial landscape, the imperative of employing highly effective moisture barrier and waterproofing systems cannot be overstated. The corrosive and erosive impacts of water and moisture on structures, walls, and various building components underscore the critical importance of such protective measures.

Enter Hybrid Seal—a cutting-edge two-component product meticulously crafted in accordance with the latest scientific advancements and international standards to address this pressing need. This ready-to-use mortar stands out for its exceptional elasticity, durability, and outstanding adhesion to cementitious, concrete surfaces, and other building materials.

Hybrid Seal goes beyond conventional solutions, offering comprehensive waterproofing capabilities coupled with resilience against both positive and negative water pressure. Elevate your construction projects with the assurance of a product that not only meets but exceeds the stringent demands of modern moisture management.

## Engineering Products

### EPOXY-POLYAMIDE FINISH

EN-2207

Color Options: Customizable upon request

Elevate your painting experience with Epoxy-Polyamide Finish, meticulously crafted from top-tier raw materials within the paint industry. This product, available in two components, stands as a testament to durability, showcasing remarkable resistance to corrosive elements, erosion, and a spectrum of chemical substances, including acids and bases.

Renowned for its superior performance, this paint finds widespread application in demanding environments such as refinery and petrochemical industries, power stations, and dam construction projects. Its notable resistance to water and humidity further enhances its appeal, making it a premier choice for projects where longevity and robust protection are paramount.

### ROOF COATING

EN -3212

Color Options: White

Introducing our white roof coating—an advanced and uniform solution that surpasses traditional moisture insulations like bitumen and asphalt. Crafted from flexible water-based resins, this coating stands out for its resilience against climatic factors, UV radiation protection, and leak prevention.

Designed for versatility, it exhibits excellent adhesion properties on various surfaces such as cement, asphalt, and concrete. The homogeneous and seamless application of this roof coating makes it an ideal choice for sealing roofs, walls, and floor surfaces in kitchens, bathrooms, and lavatories before tile and ceramic installations.

This water-dilutable coating is not only environmentally friendly but also boasts ease of application, odorlessness, and a lightweight composition compared to asphalt and bitumen coatings. Its energy-efficient features contribute to reduced waste in buildings, while its antifungal properties add an extra layer of value to this exceptional product. Choose the future of roof protection and insulation with our white roof coating.

### STONE LACQUER

EN -2040

Color Options: Transparent

Introducing Stone Lacquer—an exceptional solution with unparalleled adhesion properties specifically tailored for stone and brick surfaces. Embraced across the construction industry, this lacquer stands out for its distinctive features, including a glossy finish, robust protection against UV radiation, and remarkable resistance to both abrasion and washing.

Ideal for enhancing the aesthetics and longevity of stone and brick surfaces, Stone Lacquer is a trusted choice for those seeking a reliable and visually appealing solution in construction projects. Elevate your surfaces with a protective layer that not only shines but also withstands the test of time, maintaining its luster even in challenging environmental conditions. Choose transparency with Stone Lacquer for a seamless blend of durability and aesthetics.

### SPECIAL SEALER FOR ACRYLIC PAINTS- LATEX AND FACADE

EN -3307

Color Options: N/A

Introducing Start Latex & Facade, a premium water-based sealer designed to enhance and fortify a multitude of surfaces including plaster, concrete, brick, and composite panels. This sealer serves as a crucial preparatory step, saturating surfaces to minimize paint consumption while significantly elevating adhesion properties and the overall durability of the final finished coat.

An essential prerequisite for water-based paints, Start Latex & Facade boasts a user-friendly application process, being both odorless and easily dilutable with water. Its environmentally friendly composition aligns with modern sustainability standards, making it a responsible choice for conscious consumers. Elevate your painting experience with a sealer that not only improves performance but also reflects a commitment to ease of use and environmental responsibility.

### VINYL EMULSION WASHABLE PAINT

EN -4009

Color Options: White (Custom colors available)

Unveiling Vinyl Emulsion Paint, AQUA—a masterfully crafted solution derived from a vinyl acetate copolymer base. Engineered for interior applications, this versatile paint is designed to grace a variety of surfaces, including plaster, cement, concrete, brick, wood, and composition panels.

Noteworthy for its exceptional attributes, Vinyl Emulsion Paint, AQUA, offers high resistance against washing, ensuring long-lasting vibrancy. With its rapid drying time, extensive coverage, and superior brushability, this paint embodies efficiency in every stroke. Water dilutability enhances user convenience, while excellent adhesion properties guarantee a seamless finish on diverse surfaces. Experience the advantages of easy application, a virtually odorless formula, and environmental friendliness—all inherent qualities of this exceptional product. Elevate your interior spaces with Vinyl Emulsion Paint, AQUA, where performance meets aesthetics.

### ENINCO AEROSOL SPRAY PAINT

EN -6000

Color Options: Customizable upon request

Introducing ENINCO Aerosol Spray Paint—an innovative formulation crafted from modified air-drying resins, ensuring a swift drying process. Versatile and reliable, this product comes highly recommended for an array of surfaces, including metal, wood, plaster, and concrete.

Experience the ease of transforming diverse materials with the quick-drying efficiency of ENINCO aerosol spray paint. Elevate your projects with a paint that not only offers exceptional performance but also opens the door to a customizable color palette tailored to your preferences.

### ALLKYD URETHANE LACQUER

EN -2706

Color Options: Transparent

Introducing Alkyd Urethane Lacquer, PEARL—meticulously crafted for the maritime world, this lacquer is designed to elevate the aesthetic and protective qualities of boat and ship interiors and exteriors. Ideal for covering a spectrum of wooden surfaces, including sailing masts, joist rope holders, and deck areas, PEARL extends its excellence to all wooden materials within vessels, from doors and shelves to furniture and cabinetry.

Notable for its transformative properties, this lacquer dries to a high-gloss finish, boasting unparalleled resistance to abrasion, scratches, and corrosion—especially in saline and freshwater environments. Beyond its protective qualities, PEARL ensures superior durability, preserving the natural streaks and appearance of wood. Immerse your maritime investments in the advantages of Alkyd Urethane Lacquer, PEARL, where enduring beauty meets uncompromising protection.

### DOLPHIN, SWIMMING POOL PAINT

EN -2804

Color Options: White and Blue

Dive into excellence with Pool Paint, DOLPHIN, a specially formulated coating based on waterproofed and quick-drying resins. Tailored for application on cement and concrete surfaces, this paint is the go-to choice for swimming and freshwater pools, thanks to its rapid drying time, exceptional durability, and superior adhesion to cement surfaces.

Experience the ease of application, coupled with full coverage, as Pool Paint, DOLPHIN, effortlessly transforms surfaces with a vibrant, lasting finish. Beyond aesthetics, this paint provides robust protection against sunlight and UV radiation, ensuring your pool maintains its allure while withstanding the rigors of aquatic environments. Immerse your pool in the advantages of Pool Paint, DOLPHIN, where performance meets aesthetics with every stroke.

### ANTI-CRACK FINISH PAINT

EN-3225 Matt, EN-3220 Semi-Gloss

Color Options: White

Elevate your surfaces with the innovative Anti-Crack Finish Paint, designed for resilient performance on surfaces marked by cracks, seams, and pores. Engineered with superior elasticity and flexibility, these paints are your shield against cracks even after the final coat is applied, ensuring a flawlessly smooth appearance.

Experience the ease of application, water dilutability, and odorless formulation as you apply this anti-crack paint, virtually eliminating the appearance of cracks on surfaces. Beyond functionality, revel in the environmentally friendly composition, unmatched durability, and protection against sunlight and UV radiation—turning every stroke into a masterpiece that stands the test of time. Choose the Anti-Crack Finish Paint for surfaces that defy the passage of time with elegance and resilience.

### WATER- BASED WALL SEALER

EN -3309

Color Options: N/A

Introducing our Water-based Wall Sealer, a transformative solution that not only repairs cracks, seams, and pores on porous surfaces but also enhances adhesion properties, extends coverage, and fortifies durability. This versatile sealer is engineered for both interior and exterior applications, proving indispensable as a preparatory step before applying water-based paints on absorbent surfaces like plaster, cement, brick, wood, and composite panels.

Experience the advantages of our innovative product, including a rapid dry time, user-friendly application, water dilutability, and an odorless formulation. Committed to environmental responsibility, this sealer is not only eco-friendly but also showcases superior alkali resistance and exceptional adhesion properties to various building materials. Elevate your painting projects with a sealer that goes beyond conventional solutions, ensuring a flawless finish that stands the test of time.

### ANTI – BACTERIAL SMART PAINT

EN-3301 Gloss, EN-3302 Semi-Matt

Color Option: N/A

Our advanced solutions for a cleaner, safer environment. Crafted with precision, our Anti-Bacterial Smart Paint is formulated from modified water-based acrylic resins and eco-friendly materials with proven antibacterial properties. This innovative coating doesn't just cover surfaces; it actively eliminates even the most resistant and pathogenic bacteria, ensuring a sustained protective shield as long as ENINCO Anti-Bacterial paint graces the surface.

Certified by accredited laboratories, both domestic and international, in accordance with stringent international standards, this paint is your assurance of a hygienic space. Ideal for interior applications on various surfaces such as plaster, cement, brick, and composite panels, it finds its niche in spaces with heightened hygiene concerns, including hospitals, kindergartens, and children's bedrooms.

Experience the advantages of ease of application, odorless formulation, full coverage, and high washability, making maintenance a breeze, catering to diverse applications and preferences. Elevate your spaces with a paint that not only beautifies but actively contributes to a healthier environment.

### KENITEX - ACRYLIC PERLITE TEXTURED PAINT

EN-3136 Soft Textured, EN-3137 Medium Textured, EN-3138 Rough Textured

Color Option: White (Custom colors available) / Sheen: Matt

Elevate your surfaces with Kenitex Acrylic Perlite Textured Paint, available in three remarkable variants. Crafted from water-based acrylic resins, this textured paint is designed to transform both interior and exterior spaces with speed, beauty, and enduring durability. Ideal for a spectrum of settings, including residential buildings, villas, hospitals, hotels, halls, restaurants, and shopping centers, Kenitex adapts to various surfaces such as plaster, cement, brick, and composite panels.

Suitable for rugged surfaces and structural cracks, Kenitex boasts a special texture that not only covers but enhances the aesthetic appeal. Enjoy the advantages of easy application, heightened resistance to atmospheric conditions, washability, and an odorless formulation. Additionally, its antifungal, anti-moss, and anti-algae properties contribute to the longevity and cleanliness of your painted surfaces.

Experience the artistry of texture with Kenitex Acrylic Perlite Textured Paint, where form meets function for a visually stunning and resilient finish.

### UNIVERSAL COLORANT

EN -6565

Color Options: Refer to Catalog for Available Choices

Introducing our Universal Colorant, a versatile solution designed for multifaceted applications in solvent-based, acrylic water-based, and PVA-based paints. Unlock a world of possibilities by exploring our extensive catalog for a wide array of color choices.

### ACRYLIC – SILICON SEALER

EN -3308

Prior to the application of ENINCO's acrylic-silicon paints for exterior (EN-3104) and interior use (EN-3111), as well as acrylic latex & facade, it is essential to use our Acrylic-Silicon Sealer on absorbent surfaces like plaster, concrete, brick, and composite panels.

This sealer is a comprehensive solution, adept at repairing cracks, seams, and pores on porous surfaces. Its exceptional permeability and water resistance not only enhance adhesion for subsequent paint layers but also contribute to increased coating and color stability. Notably, the sealer's outstanding property lies in surface breathability (EN-3308).

Embrace the advantages of our sealer, including washability, full coverage, quick dry time, ease of application, water dilutability, odorless formulation, resistance to abrasion, protection from sunlight and UV radiation, and environmentally friendly composition. Elevate your painting projects with a sealer that goes beyond the surface, ensuring enduring quality and performance.

### ACRYLIC COLORANT

EN -3117

Color Options: Complete Spectrum Available

Elevate your painting experience with our Acrylic Colorant, meticulously crafted from top-tier raw materials within the paint industry. Ideal for both interior and exterior surfaces, including plaster, cement, brick, and composite panels, this colorant sets the stage for fast, beautiful, and enduring transformations.

Unlock your creative vision by adding this colorant to any facade acrylic water-based paint, achieving a spectrum of desired colors with its impressive coloring properties. Enjoy the advantages of water dilutability, an odorless application process, environmental friendliness, high washability, and a quick dry time.

Empower your painting projects with a colorant that not only enhances vibrancy but also prioritizes user convenience and environmental responsibility. Immerse your spaces in a world of possibilities with our Acrylic Colorant.

### ACRYLIC WATER-BASED LACQUER

EN-3112 Gloss, EN-3113 Semi-Gloss, EN-3114 Matt

Color Options: Transparent

Introducing Acrylic Water-Based Lacquers. Designed to elevate the durability and longevity of water-based acrylic paint, these lacquers provide enhanced resistance against sunlight and climate factors, resulting in surfaces with a captivating view and desired sheen.

With a rapid dry time, these lacquers effortlessly enhance the visual appeal of acrylic paint, ensuring a beautiful and lasting finish. Enjoy the advantages of washability, strengthened top coat, ease of application, water dilutability, odorless formulation, abrasion resistance, and environmental friendliness. Elevate your surfaces with our Acrylic Water-Based Lacquers, where longevity meets aesthetics with a choice of gloss levels to suit your preferences.

Important Note: While the Matt Sheen (EN-3114) imparts a slight color difference in dark hues due to its matte nature, it maintains minimal impact on lighter hues.

### MASTER - ACRYLIC LATEX PAINT

EN -3131 Matt

Color Options: White

Unleash the brilliance of Acrylic Latex Paint, MASTER—a testament to excellence crafted from premium water-based acrylic resins. Tailored for swift, beautiful, and enduring transformations, this paint is your go-to solution for both interior and exterior surfaces, including plaster, cement, brick, wood, and composite panels.

Discover the advantages that set MASTER apart: water dilutability, an odorless application process, environmental friendliness, rapid dry time, full coverage, abrasion resistance, and robust protection from sunlight and UV radiation. Elevate your painting projects with a product that combines aesthetics and performance, ensuring lasting vibrancy and durability on every brushstroke. Choose MASTER for a masterpiece that stands the test of time.

### CASTEL - ACRYLIC FACADE PAINT

EN-3101 Matt, EN-3105 Gloss

Available Colors: White (All other colors are available)

Acrylic Facade Paint, CASTLE is produced based on high-quality water-based acrylic resins and is utilized for fast, beautiful, and durable painting on interior and exterior parts of the building and various surface types such as Plaster, cement, brick, wood, asbestos cement and also composite panels. This paint is presented for different applications, especially for painting the building facades. Ease of application, odorless, full coverage, and high washability can be considered as the advantages of this product.

Introducing our Water-based RADIATOR PAINT, a versatile solution designed for both decorative and protective purposes on radiators and thermo pipes. Engineered to withstand temperatures of up to 80°C, this paint offers a harmonious blend of heat protection, water mixability, and environmental friendliness. Its user-friendly attributes include ease of application, quick dry time, and high resistance to minor temperature increases and abrasion.

Experience the advantages of our Radiator Paint, where functionality meets aesthetics. Not only does it offer robust protection, but it also provides a quick-drying formula and shields against the harmful effects of sunlight and UV radiation. Elevate your radiator painting experience with a product that seamlessly combines practicality, efficiency, and enduring quality.

### ALUMINIUM PAINT

EN -4012

Color Option: Silver

Introducing our Aluminum Paint, meticulously crafted from top-quality raw materials in the paint industry. Revel in the myriad advantages this product brings, featuring a quick dry time, exceptional durability, robust adhesion properties, and full coverage for a flawless finish. Ideal for both interior and exterior applications, this paint stands out on various surfaces, including metal, wood, plaster, cement, bricks, and composite panels, thanks to its high resistance to abrasion and climatic factors.

Moreover, our Silver Aluminum Paint boasts additional notable properties, including resistance to fading, effective heat reflection, protection against UV radiation, a captivating high sheen, and comprehensive coverage. Elevate your surfaces with the brilliance of Aluminum Paint, where superior performance and aesthetics converge for a lasting and visually stunning result.

## Specialty Products

### ACRYLCOAT

Acrylcoat stands as a fast-drying, one-component, solvent based solution meticulously designed for plastic surfaces. This specialized coating provides comprehensive protection, guarding against 100% UV radiation, moisture, and the exposure to chemical or mechanical damage. It effectively prevents the effects of aging, wear, and deformation while preserving the original appearance and original coating of an array of plastic surfaces.

The versatility of Acrylcoat is demonstrated by its application to components of varying sizes, from small plastic elements found on electronics to the larger surfaces of automobile dashboards and bumpers. Its utility extends across a broad spectrum of products, encompassing automotive body parts, laboratory equipment, industrial machinery, building trim materials, computers and mobile technology.

### ENIWALL

Eniwall stands as a remarkable one-component, low-odor, extra-covering matte wall paint meticulously designed for indoor applications. With a VOC percentage nearing zero, it represents a breakthrough in decorative paint technology, addressing critical challenges prevalent in the market.

In regions characterized by high humidity, the issue of fungus and mold growth on the dried paint film is a common concern. ENIWALL has not only successfully tackled this problem but has also made substantial strides in environmental responsibility by crafting an eco-friendly paint formula. This innovation results in a dual impact, both economically and environmentally.

### ETERNAL

Eninco is pleased to introduce our latest breakthrough in metal coating technology: ETERNAL. This innovative coating, a Polyasphartic paint, has been meticulously engineered to significantly enhance the longevity of metallic equipment by preventing moisture absorption and water ingress. ETERNAL is a two-component, solvent-based solution known for its exceptional adhesion capabilities, making it ideally suited for direct application to bare metal surfaces, including carbon steel. With ETERNAL, common industry challenges such as adhesion issues, the necessity for multiple coating layers, and prolonged application intervals become a thing of the past. Trust ETERNAL as the definitive professional solution to address these concerns in industrial applications.

## Specialty Products

### SUPER LOTUS

Super Lotus is a pioneering one-component water-based coating, setting new standards in wood protection. This Smart wood coating offers robust defense against abrasion, scratches, UV light, tension, and humidity penetration. Suitable for fine furniture, architectural projects, and the broader wood industry, it delivers top-notch performance and easy cleaning with soap and water.

Super Lotus deeply penetrates freshly harvested wood, offering long-lasting protection. It features low-VOC content, minimal odor during application, and exceptional penetration, even in diverse climate and weather conditions. For hardwood, particularly Oak, Super Lotus is the ultimate solution, effectively preventing and addressing excessive tannin staining.

## Raw Materials

### Titanium Dioxide - TiO<sub>2</sub> 80%

EN-8680

Applications:

Dispersion Paints (Interior and Exterior)  
Aqueous and Solvent Flat Paints with Low Gloss  
Paper Coatings with Exceptional Dry Flat Hiding Effect  
Wallpaper Coatings  
Silicon Paints

EN-8680, a micronized rutile pigment manufactured via the sulfate process, boasts exceptional qualities. This pigment is lattice-stabilized with alumina and meticulously surface-treated with aluminum and silicon compounds. It is renowned for its superb surface treatment, which results in outstanding attributes such as exceptional hiding power, remarkable durability, excellent resistance to light and weather, especially in high polyvinyl chloride (PVC) applications, and remarkable dispersibility.

### Titanium Dioxide - TiO<sub>2</sub> 88%

EN-8488

Applications:

Dispersion Paints (Interior and Exterior)  
Wallpaper Coatings  
Plasters & Plaster Paints  
Plaster Paints Based on Synthetic Resins  
Silicate Paints and Plasters  
Silicone Paints  
Leveling Products  
Mastics and Sealants  
Carton-Paper Coatings  
Road Marking Paints  
White Concrete  
Electrodes

EN-8488, a micronized rutile pigment derived from the sulfate process, distinguishes itself through meticulous craftsmanship. This pigment is lattice-stabilized with alumina and subjected to precise surface treatment involving aluminum and silicon compounds. Notably, this pigment excels in terms of superior light and weather stability, particularly when applied externally, especially within the context of higher PVC ranges.

## Raw Materials

### Titanium Dioxide - TiO<sub>2</sub> 94%

EN-3394

Applications:

Dispersion paints (exterior and interior)  
Industrial and decorative coatings (water & solvent base)  
Radiator paints  
Coil-coatings  
Household Appliance Coatings  
Powder coatings (exterior, interior)  
Plaster paints (plaster paints based on synthetic resins)  
High gloss dispersions  
Printing inks

EN-3394 represents a micronized rutile pigment of exceptional quality. This pigment is meticulously lattice-stabilized using alumina and meticulously surface-treated with a blend of aluminum and zirconium compounds. Notably, EN-3394 stands out for its augmented hydrophilic properties, achieved through a unique organic treatment. Consequently, it finds its place within the esteemed "HIGH-DURABILITY" classification.

### Titanium Dioxide - TiO<sub>2</sub> 96%

EN-1996

Applications:

Masterbatches  
PVC for Interior Use  
Indoor Plastics

EN-1996, a micronized rutile pigment meticulously produced through the sulfate process, exemplifies precision and quality. This pigment undergoes precise lattice stabilization with alumina and receives a surface treatment utilizing aluminum compounds. What truly sets EN-1996 apart is its organic treatment with unique compounds, yielding impressive hydrophobic properties, exceptional dispersibility, and a dust-free processing experience when incorporated into plastics.

## Raw Materials

### Carbon Black

EN-1023

Applications:

Paint Industry  
Automotive Industry  
Rubber Products  
Synthetic Leathers  
Wire and Cables  
Pipes  
Molding Industry  
Plastic Industry  
Weaving  
Stationary

This Carbon Black, in combination with active Carbon, despite its similar appearance, exhibits significant differences in chemical and functional characteristics compared to Carbon Black alone. It is produced through the incomplete combustion of heavy petroleum products such as FCC bitumen, coal bitumen, or ethylene cracking bitumen. Many of its properties can be controlled through the partial combustion of oils or gases. Comprising minuscule particles primarily composed of carbon, it finds extensive use as a black pigment across various manufacturing industries.

### Calcium Carbonate

EN-0923

Applications:

Paint Industry (Water based)  
Primers  
Road Marking  
Rubber  
Printing Paste  
Printing Inks (Water Based)  
Paper  
Optimize the use of TiO<sub>2</sub>

Sedimentary, possessing distinctive properties, it is characterized by its particle morphology, uniform, narrow particle size distribution, and unique shape. Thanks to its exceptional brightness, this product has the potential to reduce the demand for titanium dioxide in a wide range of applications, thereby preserving product quality and potentially lowering the final product's cost.
